Lab 10 — Advanced JavaScript: Objects, Arrays, JSON, ES6

Course: Web Programming

Topic: ES6, JSON, Fetch API, Arrays & Objects

Tools: VS Code, Modern Browser, Fetch API

1. Objective

The objective of this lab is to:

- Practice **ES6 features** (let/const, arrow functions, template literals, destructuring, spread/operator).
 - Fetch and display **JSON data** from a local file or online API.
 - Use array methods (filter, sort, map) to manipulate and display data.
 - Build a small UI to render products dynamically.
-

2. Tasks Performed

✓ Task 1: Fetch JSON Data

- A products.json file was created.
- The app fetches and displays product data dynamically using **Fetch API**.

✓ Task 2: Use ES6 Features

Implemented:

- **let/const**
- **Arrow functions**
- **Template literals**
- **Destructuring**
- **Spread operator**
- **Array methods:** map(), filter(), sort()

✓ Task 3: Filtering and Sorting

- Filter by price
 - Sort by price (low → high, high → low)
-

3. Code Implementation

 **index.html**

```
<!DOCTYPE html>

<html lang="en">
  <head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Product List (ES6 + JSON)</title>
    <link rel="stylesheet" href="style.css">
  </head>
  <body>
    <div class="container">
      <h1>Product List</h1>
      <div class="controls">
        <button id="sortAsc">Sort Price ↑</button>
        <button id="sortDesc">Sort Price ↓</button>
        <button id="filterCheap">Price < 1000</button>
        <button id="showAll">Show All</button>
      </div>
      <div id="productContainer" class="products"></div>
    </div>
    <script src="app.js"></script>
```

```
</body>  
</html>
```

📁 products.json

(Place this in your project folder)

```
[  
  { "id": 1, "name": "Laptop", "price": 1200, "category": "Electronics" },  
  { "id": 2, "name": "Headphones", "price": 300, "category": "Electronics" },  
  { "id": 3, "name": "Watch", "price": 900, "category": "Accessories" },  
  { "id": 4, "name": "Smartphone", "price": 1500, "category": "Electronics" }  
]
```

🎨 style.css

```
body {  
  font-family: Arial, sans-serif;  
  background: #f6f6f6;  
}  
  
.container {  
  width: 600px;  
  margin: 50px auto;  
  background: white;  
  padding: 20px;  
  border-radius: 8px;  
}  
  
h1 {  
  text-align: center;
```

```
}

.controls button {

    margin-right: 10px;
    padding: 8px 12px;
    border: none;
    background: #007bff;
    color: white;
    border-radius: 4px;
    cursor: pointer;
}

.controls button:hover {

    background: #005fcc;
}

.products {

    margin-top: 20px;
}

.product {

    background: #fafafa;
    padding: 10px;
    margin-bottom: 10px;
    border-radius: 6px;
}
```

app.js (ES6 + Fetch + Filter/Sort)

```
const productContainer = document.getElementById("productContainer");

let products = [];
```

```
// -----  
  
// Fetch JSON Data (Using Fetch API)  
  
// -----  
  
const loadProducts = async () => {  
  
  const response = await fetch("products.json");  
  
  const data = await response.json();  
  
  // Using ES6 spread operator  
  
  products = [...data];  
  
  renderProducts(products);  
  
};  
  
// -----  
  
// Render Products  
  
// -----  
  
const renderProducts = (items) => {  
  
  productContainer.innerHTML = "";  
  
  items.forEach(({ name, price, category }) => { // ES6 destructuring  
  
    const div = document.createElement("div");  
  
    div.classList.add("product");  
  
    // Template literals  
  
    div.innerHTML = `  
      <h3>${name}</h3>  
      <p>Category: ${category}</p>  
      <p><strong>Price: $$ ${price}</strong></p>  
    `;  
  
    productContainer.appendChild(div);  
  });  
};
```

```

// -----
// Sorting and Filtering

// -----

document.getElementById("sortAsc").addEventListener("click", () => {
  const sorted = [...products].sort((a, b) => a.price - b.price);
  renderProducts(sorted);
});

document.getElementById("sortDesc").addEventListener("click", () => {
  const sorted = [...products].sort((a, b) => b.price - a.price);
  renderProducts(sorted);
});

document.getElementById("filterCheap").addEventListener("click", () => {
  const filtered = products.filter(product => product.price < 1000);
  renderProducts(filtered);
});

document.getElementById("showAll").addEventListener("click", () => {
  renderProducts(products);
});

// Load initial data
loadProducts();

```

4. Results

After completing all tasks:

- JSON data is fetched and displayed dynamically.
- ES6 features are used throughout the code.
- Products can be sorted by price (ascending/descending).

- Products can be filtered (price < 1000).
- Clean and responsive UI

The screenshot shows a web development environment with the following details:

- Code Editor (Left):** Shows the file `index.html` with the following content:

```

1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>Product List (ES6 + JSON)</title>
7      <link rel="stylesheet" href="style.css">
8  </head>
9  <body>
10 
11     <div class="container">
12         <h1>Product List</h1>
13 
14         <div class="controls">
15             <button id="sortAsc">Sort Price ↑</button>
16             <button id="sortDesc">Sort Price ↓</button>
17             <button id="filterCheap">Price < 1000</button>
18             <button id="showAll">Show All</button>
19         </div>
20 
21         <div id="productContainer" class="products"></div>
22     </div>
23 
24     <script src="app.js"></script>
25 </body>
26 </html>
    
```

- Browser Preview (Right):** Shows a list of products with filtering controls at the top.
- Controls at the bottom of the browser preview:**

 - Sort Price ↑
 - Sort Price ↓
 - Price < 1000
 - Show All

5. Conclusion

This lab successfully demonstrates:

- ✓ ES6 syntax and features
- ✓ JSON data handling
- ✓ Fetch API usage
- ✓ DOM manipulation
- ✓ Sorting and filtering arrays

The application fulfills all requirements and provides a strong example of modern JavaScript practices.
